

FIESTA Academic License Version 1.00.0000

The following license governs the use and distribution of FIESTA (Fluorescence Image Evaluation Software for Tracking and Analysis) a MATLAB based software tool to track sub-resolution particles and filaments in light microscopy images. Although the software has reached a state of versatile applicability, FIESTA is (and in the future will be) under constant development.

Introduction

The authors wish to make FIESTA available, in executable form, free for academic research use, while retaining the rights to the source code and future development.

License Agreement

- 1) The authors of this software are Felix Ruhnnow and Stefan Diez at the BCUBE in Dresden, Germany (<http://www.bcube-dresden.de>) and all right, title and interest, including copyright, remain with the authors.
- 2) The authors grant a license to use the software with the following limitations:
 - a. The software can only be used for non-commercial academic and research purposes. This means that the software may only be used under this license by academic non-profit organizations (including universities, government entities and academic institutions) for research or educational purposes, where such research is not subject to any written agreement allowing a commercial or for-profit entity to impose intellectual property rights restrictions on the published results.
 - b. For projects that make use of the filament-tracking algorithm, the authors do not expect co-authorship. However the paper in which the algorithm is published should be cited, and the authors would appreciate being mentioned in the acknowledgments when FIESTA made a significant contribution.

The authors may be willing to modify the software in response to specific needs and requests. In this case any usage of the software should be considered a collaborative effort. As such, the authors must be informed as to the content of the project for which the software is being used, and in the case of a resulting publication should be offered co-authorship. The authors will evaluate the contribution of FIESTA to the reported results prior to acceptance of co-authorship and may not always take advantage of the offer.

- c. Any modifications or derivative works based on the software that results are considered part of the software and the authors retain ownership.

- 3) If a licensee wishes to make commercial use of this software, a license must be negotiated with the authors allowing such use. Commercial use includes (but is not limited to) distribution of the software for profit, use of the software in a manner intended to generate profit, and use of the software to provide services for a for profit organization.

Disclaimer of Warranty

This software is provided by the authors on an "as is" basis, without warranty of any kind, either expressed or implied including, without limitation, warranties that the software is free of defects, fit for a particular purpose, merchantable, or non-infringing. Risk as to quality of the software, performance, and data lost are entirely with the user of this software. In no event the authors or their related contributors be liable for any direct, indirect, incidental, special, exemplary, or consequential damages however these damages were caused. The acceptor of this license assumes all costs of service, repair, or correction. No use or modification of this software is authorized except by the acceptance of this license and under this disclaimer.

General

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.
